

Step 1: the framework

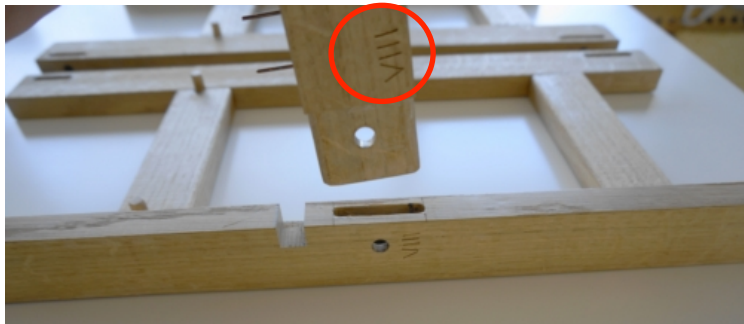

Before you can assemble the organ, you first have to construct the framework.

1. What do you need?

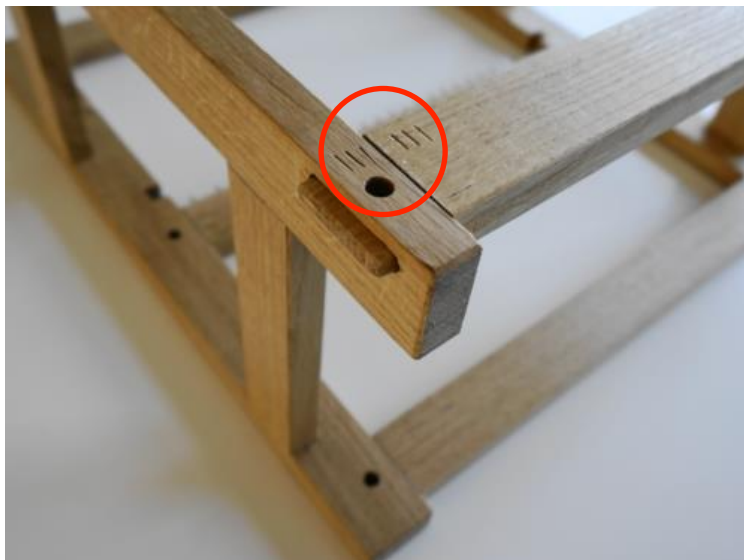

- 2 side frames
- 6 staves
- box containing 12+1 wooden pins (1 is a spare)

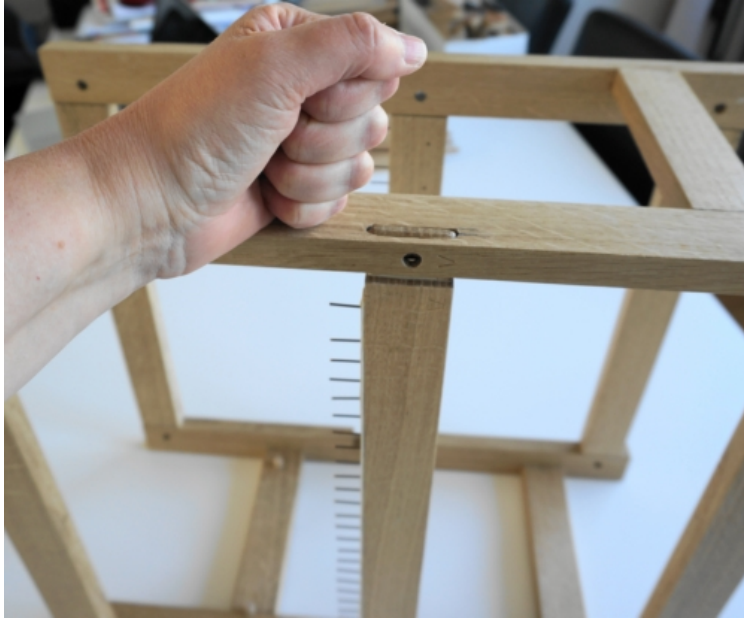

1. How to proceed

- Lay the first side frame flat on the table.
- Find the Roman numerals on the frames and the staves.

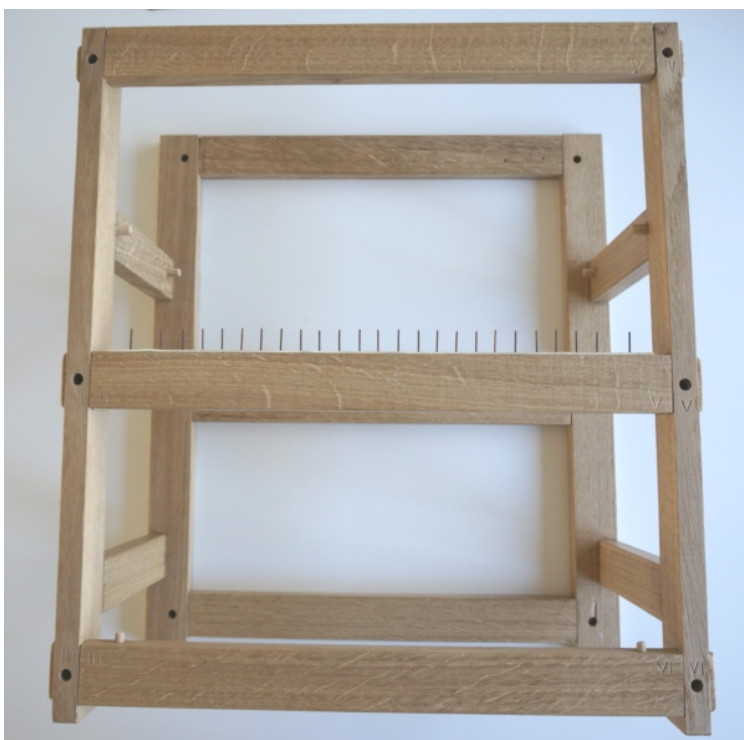

- Insert the 6 staves in the corresponding holes.
- Verify that the Roman numerals match.

- Lay the second side frame on top.
- Again, verify the Roman numerals.
- Press the staves simultaneously into the holes on the side frame.

- Check that the staves are pressed far enough into the holes
- Insert the wooden pegs into their holes to lock the parts together. (The pins should not be pressed in so tightly that they can't be easily removed)

- Turn the framework right side up.
- You have now assembled the framework for the organ.
